

A scatter plot showing the relationship between $\log_{10}(\Delta T)$ (Y-axis) and $\log_{10}(\Delta T_{\max})$ (X-axis). The X-axis ranges from 18.38 to 18.46, and the Y-axis ranges from 0.5 to 1.5. The plot displays a dense cluster of points, primarily concentrated between $\log_{10}(\Delta T_{\max})$ values of 18.42 and 18.44, and $\log_{10}(\Delta T)$ values of 0.8 and 1.2. The points are colored in various shades, including purple, blue, green, yellow, orange, red, and pink, suggesting different stellar populations or evolutionary stages. A grid is overlaid on the plot, with major lines every 0.02 units on the X-axis and every 0.2 units on the Y-axis.
